Education

2023

PhD in Electronic and Electrical Engineering
University of Strathclyde, Glasgow, UK

2018

MEng in Electrical and Computer Engineering
National Technical University of Athens, Greece

Publications

- [PhD Thesis](#)
- A Comparison of the Performance of 2D and 3D Convolutional Neural Networks for Subsea Survey Video Classification, OCEANS 2021
- Automatic Annotation of Subsea Pipelines using Deep Learning. MDPI Sensors

Relevant Skills

- Python, C++, Unix Bash
- MLOps, ClearML
- PyTorch, Scikit-learn, Pandas, NumPy, requests
- AWS, GCP, Docker, Git, CI/CD
- ADK, AutoGen, A2A, LangChain

Languages

Greek (Native)
English (Professional)
French (B2)
Spanish (Basic)

Interests

Competing in triathlon races, hiking, guitar playing, chess

Anastasios (Tasos) Stamoulakatos

Data Scientist / AI Engineer

Senior Data Scientist and AI Engineer with a PhD in Applied AI and 3+ years of commercial experience. Specialized in AI multi-agent systems, LLM-based workflows, RAG/GraphRAG, and Computer Vision, with strong end-to-end ownership from research to production. Experienced across marketing, agriculture, pharmaceuticals, oil & gas, transportation, and manufacturing. Strong communicator with stakeholders and a product-oriented mindset.

Experience

○ **March 2025 - Present** | *Satalia, Athens, Greece (remote for London)*

Data Scientist

- Designed and deployed LLM-based multi-agent systems using Google ADK, Microsoft AutoGen, LangChain, MCP for WPP
- Designed LLM-as-a-judge paradigms for assessing RAGs and Agentic workflows
- Compared RAG and GraphRAG pipelines with custom document parsing
- Deployed agents via A2A, GCP Cloud Run, and CI/CD pipelines
- Developed Chainlit-based chatbot UIs for evaluation and internal demos
- Benchmarked agent collaboration strategies and GraphRAG vs RAG approaches
- Contributed to internal R&D on agent architectures, tool orchestration, prompt design, and evaluation
- Shared AI insights through internal documentation and technical blog posts
- Designed an Image Retrieval pipeline for Apple

○ **June 2023 - February 2025** | *Track32, Ede, Netherlands*

AI and Computer Vision Engineer

- Responsible for the continuous improvement of 5 ML services through model improvement and addition of production-ready features for image processing and comprehensive statistical reporting
- Lead data scientist of the [Seedling Measurement App](#) of Track32 which is currently used by 14 clients and supports 28 crops
- Packaging of AI models for inference
- Setting up and maintaining the MLOps pipeline for experiment tracking and reproducibility, data versioning and model quering for automatic model release
- Development of active learning and automatic pre-labeling strategies
- Writing project proposals and responsible for internal R&D
- Supervising Masters students for their internships
- Presenting monthly to stakeholders from [Syngenta](#)

○ **April 2022 - April 2023** | *CMAC, Glasgow, UK*

Postdoctoral Research Associate

- Improved decision-making in medicines manufacturing by developing AI models that correlate particle microscopy data with bulk powder properties
- Worked on embedding visualization and similarity for new inference points
- Developed GUI app using PyQt and deployed models so that they can be used by non-technical lab personnel
- Presented monthly to stakeholders from AZ, UCB, Takeda, Pfizer, Roche, Lilly
- Deliverables: Technical report, workshop with attendance of 250 individuals

○ **October 2018 - March 2022** | *University of Strathclyde Glasgow, UK*

Research Assistant

- Worked in R&D projects, developing image and video recognition AI models to automate visual inspection processes in oil and gas, agriculture, transportation and manufacturing sectors
- Specialized in domain adaptation, style transfer image generation, data augmentation, object detection and instance segmentation

Teaching Assistant

- Assisted 2nd year students in C++ lab exercises and final project
- Taught fundamentals of object oriented programming
